

INSECT-O-CUTOR

CRYONITE®

Non-Toxic Pest Control

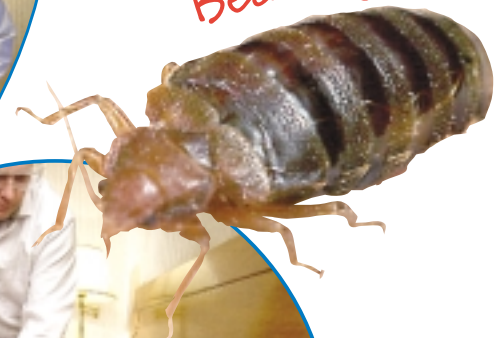

Making a World
of Difference

Cryonite is a unique and patented system that uses carbon dioxide to literally freeze insects to death. It works by emitting a carbon dioxide 'snow' through a special nozzle, that generates the optimum particle size and speed to rapidly freeze insects as it evaporates. This technique has been thoroughly tested and is now in commercial use against many crawling insect pests around the world.

Cryonite,
the new non-
pesticidal treatment
system for the
control of crawling
insect pests

*Effective against
Bed Bugs*

- Effective against most crawling insect pests, including stored product pests and bed bugs
- Preserves a completely pesticide free environment
- Enables production to be continued during treatment, minimising production downtime
- Dry treatment with no residuals
- Allows direct contact with foodstuffs
- Safe and easy to operate
- Kills all stages of insect life-cycle, adults, larvae, pupae and eggs
- Reduces costs
- Kind to the environment - uses carbon dioxide produced as a by-product of other processes.

The Cryonite system consists of a unique, patented lance, which connects to a carbon dioxide cylinder with a flexible hose. The lance is extendable to permit good accessibility and ensure outstanding results even in difficult to reach areas.

Cryonite is easy to use, with minimal personal protection required. The absence of pesticides or residues means that treatment can take place without stopping production or evacuating staff.

Applications

Food Industry -

treatment of machinery and equipment against crawling insects and stored product pests

Hospitality Industry -

fast effective treatment against bed bugs

Museums -

treatment of sensitive materials against carpet beetles, clothes moths etc.

Homes -

safe treatment against crawling insect pests

Non-Toxic Pest Control Systems

for flying insects • crawling insects • rodents
