

STERIX FUMIGATION SYSTEM

A systematic program that utilizes a cylinderized phosphine fumigant which offers a unique and strategic approach of fumigation that is capable of precise and calibrated release of gas to any fumigation work. This program can definitely address the common limitations that are currently observed with traditional fumigation using conventional fumigants in controlling and eradicating stored product pests like weevils and beetles on food commodities, seeds, and structures.

- Stocks
- Structural
- Barge/Ship
- Silo
- Container vans and trucks

ECO₂FUME fumigant gas is ready-to-use, non-flammable mixture of Phosphine and Carbon Dioxide that enables highly effective fumigation in a wide variety of sealed-storage applications.

ECO₂FUME fumigant is quickly and easily aerated. Internal concentration levels of Phosphine can be managed by adjusting the amount of fumigant release from the cylinder at any stage of the fumigation process.

ECO₂FUME produces no waste by-products or dust residues, thus eliminating the hazardous deactivation and disposal issues typically associated with traditional fumigants.

YOUR RELIABLE FUMIGATION PARTNER
